11 ABSTRACT

Method and Apparatus f r D tection of Pil t Signal With Frequency Offs t Using Multi-Stage Correlator

The disclosed embodiments relate to a method and apparatus for performing a pilot synchronization operation in a wireless communication system. The system may contain a plurality of sliding correlators that each receives a portion of a received correlation sequence and provides a partial correlation output. An absolute value block may take the absolute value of each partial correlation output. Circuitry may combine the absolute values of each of the partial correlation outputs to form a correlation output.
